AI-ASSISTED SALES ORDER CREATION

Meet PICO.
Orders at the speed of conversation.

Made for field sales: always on the move, rarely at a desk, never enough hands for a mobile screen. Just say what you need. PICO does the clicking.

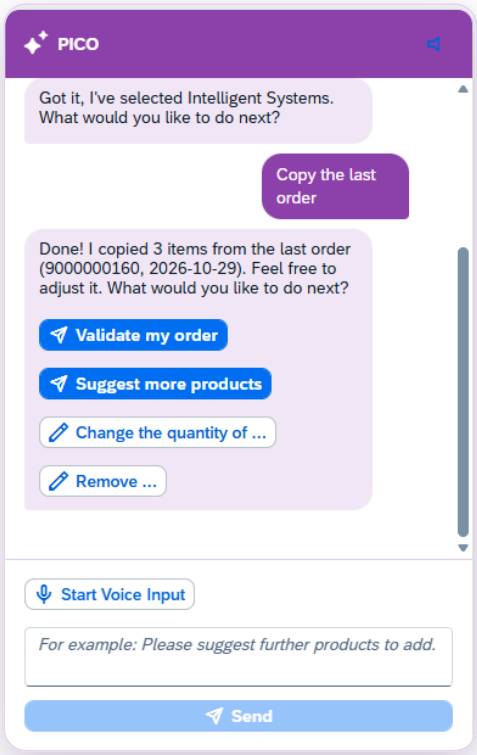

PAIN POINTS IN THE FIELD. SOLVED.

Tiny screen, endless forms Tapping through fields and tables on a phone is slow and fiddly.	**No free hands** Between appointments there is no time to type.	**Paperwork after the visit** Orders pile up for the evening or get keyed in from memory.	**Typos and forgotten items** Rushed entry means wrong quantities and missed products.
Say it instead One sentence replaces a dozen taps.	**Hands-free ordering** Voice in, voice out. Hands stay free.	**Order done on the spot** Draft or last-order copy in seconds, right at the customer.	**A second pair of eyes** PICO validates and suggests missing items before you submit.

WHAT PICO DOES FOR YOU

1. **Finds the right customer**
   Say a name or number. PICO selects the account.
2. **Drafts the order in seconds**
   Products and quantities from real buying history, each with a short reason.
3. **Edit by simply asking**
   "Add 5 tablets", "change...", "remove..." in plain language.
4. **Suggests what you may have forgotten**
   Recommendations from past orders. Accept with one click.
5. **Validates before you submit**
   Unusual quantities are flagged. Ignore a hint with one click.
6. **Repeats the last order instantly**
   "Copy the last order of customer X" straight from SAP Sales Cloud.

🎤 **Talk to it, let it talk back**
Voice input and optional voice output, on or off with one tap.

A real conversation: PICO confirms what it did and offers the next step as one-click buttons.

You stay in control

PICO prepares, you decide. Nothing is created until you press Create Order, and every change shows up in the order table straight away.

Side-by-side extension

PICO is a side-by-side extension on SAP BTP, built with SAP CAP (Node.js) and SAP Fiori. Your SAP Sales Cloud stays untouched, so the core remains clean and upgrade-safe.

Fiori UI → CAP (Node.js) on BTP → AI Core + Sales Cloud
