AI-ASSISTED VISIT DOCUMENTATION · CONCEPT

VIVA – Your Voice-First AI Visit Copilot

Just talk. VIVA turns a spoken visit debrief into a documented customer visit with follow-up tasks and updated opportunities in SAP Sales Cloud V1, asking the questions a seasoned sales expert would ask.

COMING SOON!

- Built for on the go, hands-free
- Sales-expert follow-ups
- Confirms before every CRM change

CHALLENGES TODAY

Late, click-heavy documentation
Notes typed hours later across many CRM screens.

Thin, inconsistent notes
Budget, competitor, next step often missing.

Follow-ups fall through
Promises to customers never become tasks.

No time between meetings
Reps are on the road to the next customer.

BENEFITS YOU GET

Documented in 2 minutes
Right after the visit, while it is fresh.

Complete, richer data
VIVA asks for what is missing.

Nothing gets forgotten
Tasks and updates are created instantly.

You stay in control
No CRM change without your explicit OK.

WHAT VIVA CAN DO

Find or create the visit
Detects an open visit for the customer, otherwise creates a new one.

Structured visit summary
Turns free speech into clean notes: topics, outcome, attendees.

Ask like a sales expert
Budget? Timeline? Decision maker? Competitor? Next step?

Create follow-up tasks
"Send offer by Friday" becomes a dated task for you.

Create opportunities
Spots new business in the conversation and drafts it.

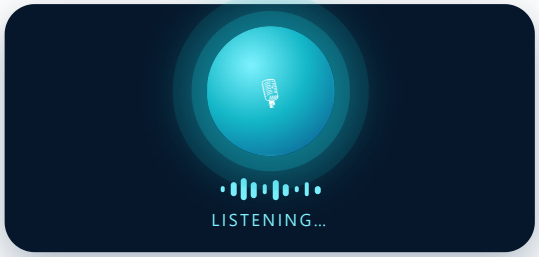

Update opportunities
Stage, value, close date, all by voice.

Transcript as attachment
The full conversation is attached to the visit for audit and reference.

Talks back
Short spoken replies. No screen needed, eyes stay free.

Made for life on the road
In the car, at the airport, between meetings: no chat, no forms, just one glowing, animated microphone. Tap once and talk.

THE WHOLE UI: ONE MICROPHONE

EXAMPLE DIALOGUE

Transcript attached to the visit

You Just left Müller Maschinenbau, new packaging line.

VIVA Found your open 10:00 visit. Budget or decision makers?

You Around 250k, the CFO signs off, Competitor X is bidding.

VIVA I would create the opportunity "Packaging Line" and a task "Send quote" due Nov 30, and move the service opportunity to Negotiation. **Shall I make these changes?**

You Yes, go ahead.

VIVA Done, all three are saved.

A TYPICAL VOICE INTERACTION: WHAT THE AI DOES, AND WHAT IT DOES NOT

1 · You speak
"Just left Müller, they want a quote for a packaging line."
HUMAN

2 · Speech to text
Your voice is transcribed in real time.
AI

3 · Understand intent
AI recognizes visit notes, tasks or opportunity changes, or asks a clarifying question.
AI

4 · Extract & ask
AI pulls out facts and asks sales-expert questions for gaps.
AI

5 · Match & validate
Customer, open visit and opportunity IDs matched against live CRM data. No guessing.
NO AI · RULES & DATA

6 · You confirm
VIVA reads back every planned change; you say "yes". Nothing is written without your OK.
HUMAN

7 · VIVA talks back
Spoken confirmation; the transcript is attached to the visit.
AI

Record lookup, visit detection, linking and the CRM writes themselves run on classic business logic, with no AI involved. VIVA never changes the CRM without your confirmation first.

Built for SAP Sales Cloud V1
Planned: VIVA reads accounts, visits, opportunities and tasks live and creates or updates records there. Runs on SAP BTP with AI via SAP Generative AI Hub.

Why not just Joule?
Joule is SAP's general assistant: answers, summaries, drafted emails. VIVA is a focused visit-debrief copilot: hands-free voice dialogue, sales-expert questions, visits, tasks and opportunities created or updated after your OK, transcript attached. It complements Joule; to be aligned with SAP's roadmap.

Not on SAP? No problem.
Modular integration layer for any CRM via standard APIs. **Next step:** pre-visit briefings and proactive "you promised X last time" reminders, all by voice.
